

## Potter Principle Number 15

Temperatures between 1500 and 3000 degrees mystify human vision while one is looking through the kiln peepholes. A transparency begins to take place when each object being fired reaches the same temperature. The objects begin to appear and disappear simultaneously, leaving a ghostly appearance.

15. The goal of the spiritual kiln is to produce a transparency that allows Christ to be seen in and through us. John 3:30; I Corinthians 13:12; II Corinthians 3:18
